JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Report from Castries, St. Lucia Island—History of yellow fever case at Bridgetown, Barbados—Requirement relative to passengers from Trinidad.

Acting Assistant Surgeon Maylie reports, May 7:

I arrived at Castries, St. Lucia, on May 7.

At Barbados, where I was detained three days, I obtained the following information relative to the case of yellow fever which occurred there during the month of April: The patient arrived April 16 from Trinidad, where yellow fever was reported present, and with other passengers was permitted to land under promise of reporting daily to the office of the port surgeon. On the third day, April 19, the patient did not report and she was visited by the port surgeon, who pronounced that she had yellow fever. She was immediately removed to Pelican Island, which is the quarantine station, situated at the northern end of Barbados and separated from the mainland by about 200 feet of water. The case has been pronounced cured and the patient was to be discharged May 7.

This port permits the landing of passengers from Trinidad under promise of reporting daily for six days to the port surgeon.
